-!- PATHWAY: Hexose monophosphate shunt.
-!- SIMILMARITY: Belongs to the 6-phosphogluconate dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

-!- CATALYTIC ACTIVITY: 6-phospho-D-gluconate + NADP(+) = D-ribulose
-!- CATALYTIC ACTIVITY: 6-phospho-D-gluconate + NADP(+) = D-ribulose
-!- PATHWAY: Hex-CO(2) + NADPH.
-!- PATHWAY: Become monophosphate shunt.
-!- SIMILARITY: Belongs to the 6-phosphogluconate dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-FEB-1995 (Rel. 31, Created)
01-FEB-1995 (Rel. 31, Last sequence update)

"Genome-based analysis of virulence genes in a non-biofilm-forming

Staphylococcus epidermidis strain (ATC 12228).";

Mol. Microbiol. 49:1577-1593 (2003).

-!-CATALYTIC ACTIVITY: 6-phospho-D-gluconate + NADP(+) = D-ribulose

5-phosphate + CO(2) + NADPH.

-!- PATHWAY: Hexose monophosphate shunt.
-!- SIMILARITY: Belongs to the 6-phosphogluconate dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      15-MAR-2004 (Rel. 43, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- CATALYTIC ACTIVITY: 6-phospho-D-gluconate + NADP(+) = D-ribulose 5-phosphate + CO(2) + NADPH.
-!- PATHWAY: Hexose monophosphate shunt.
-:- SIMILARITY: Belongs to the 6-phosphogluconate dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                          Reeves P., Stevenson G.; "Cloning and nucleotide sequence of the Salmonella typhimurium LT2 and gend gene and its homology with the corresponding sequence of Escherichia coli K12.", Mol. The DNA and protein sequences of the invention are useful for diagnosing, treating or preventing disorders associated with aberrant expression of NAAP, such as: cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis or cancer); developmental disorders (e.g. renal tubular acidosis, anamnia or mental retardation); neurological disorders (e.g. Alzheimer's disease, Parkinson's disease or epilepsy); and autoimmune/inflammatory disorders (e.g. AIDS, allergies, asthma or Crohn's disease). The DNA sequences of the invention are useful for creating transgenic animals to model human disease. The present amino acid sequence represents a human nucleic acid-associated protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Lee SY;

                                                                                                                                                            This sequence is secreted protein, encoded by a polynucleotide of the invention. The DNA was isolated from a human adult ovary CDNA library, and is designated clone AQ73 3. The DNA sequences and encoded polypeptides can be used as nutritional sources or supplements, or may immune stimulating or suppressing activity, haematopoiesis regulating activity, receptor/ligand activity, nuti-inflammatory activity, activity, activity, clemostatic/chemokinetic activity, cadherin/tumour invasion suppressor activity, tissue growth activity, tumour inhibition activity or other activity, tissue growth activity,
                                                                                      New isolated polynucleotides - obtained from human adult testis, human adult ovary, human adult brain and human adult heart cDNA libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 KPYHAHKEEMIKINKGKRFQQAVDAVEEFLRRAKGKDQTSSHNSSDDKNRRNSSEERSRP

Proteins, their agonists and/or natagonists exhibit haematopoises; proteins, their agonists and/or natagonists exhibit haematopoises; regulating activity, issue growth activity, activin/inhibin activity, rememeratiof/chemokinetic activity, haemostatic and thrombolytic activity; receptor/ligand activity; anti-inflammatory activity, haematopoises; activity; cadherin/tumour suppressor activity; and/or tumour inhibition activity. Included in the invention are probes represented in AAF98490 - AAF98572 which are specific for the cDNA clones encoding the secreted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human cDNA clones represented in AAF98374 - AAF98489 encode secreted proteins AAB90667 - AAB90750. The cDNA clones are isolated from various tissue types, and may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate protein expression. The polypeptides and nucleic acids may be used as nutrients or to modulate cytokine and cell proliferation/differentiation activity and may also be involved in modulation of the immune system. The cDNA sequences,

The present invention relates to the isolation of novel human neoplastic disease associated polypeptides, and cDNA (AAS3467-AAS35050) and DNA considers encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliferative of disorders (e.g. leukaemia, bone cancer, bladder cancer, brain stem clinks and in the diagnosis, childhood cerebellar astrocytoma, or Hoddxin's lymphoma). The sequences of the invention may also be useful of isorders, muscular disorders, immune system clisorders, pulmonary disorders, reproductive disorders, immune system disorders, pulmonary disorders, reproductive disorders and renal disorders. The polymucleotide sequences of the invention are also useful clisorders. The polymucleotide sequences of the invention are also useful clisorate therapy. AAUSIS68-AAUS1851 represent the novel human neoplastic clisanse associated polypeptides of the invention. Note: The sequence data contained in electronic form part of the printed specification, but was the wide in though published per sequences. diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, and for treating cancers, rheumatoid arthritis

(HUMA-) HUMAN GENOME

-

```
The invention relates to one of 238 disclosed human neoplastic disease—
associated polypeptides encoded by 171 disclosed cDNA sequences
(including their domains, epitopes, full-length proteins, allelic variants
or species homologues). Also included are there encoding nucleic acids, a
recombinant vector comprising the nucleic acid, a recombinant host cell
comprising the nucleic acid (expressing the protein), an isolated
antibody that binds specifically to the isolated polypeptide, preventing,
condition or a susceptibility to a pathological condition in a subject,
in a biological assay, and the gene corresponding to the CDNA sequence.
Condition or a susceptibility to a pathological condition in a subject,
in a biological assay, and the gene corresponding to the CDNA sequence.
Conditions a polypeptides, polynucleotides and antibodies are useful for
the polypeptides, polynucleotides and antibodies are useful for
ameliorating medical conditions such as hyperproliferative diseases or
ameliorating medical conditions such as hyperproliferative diseases
conference in a unique systemic lupus exprhematosus, multiple sclerosis, autoimmune thyroiditis
or haemolytic anaemia), haematopoietic or heematologic disorders (e.g.
canaemia or thrombocytopaenia), allergic reactions including asthma or
eczema, inflammatory disorders (e.g. ischaemia-reperfusion injury,
                                                                                    New isolated human neoplastic disease-associated polypeptides and polymucleotides, useful for diagnosing, preventing, prognosticating or treating medical conditions such as cancer, AIDS, diabetes or Parkinson's
                                                                                                                                                                                                                                    Claim 11; SEQ ID NO 417; 302pp; English.

The invention relates to human enzyme (ENZM) polypeptides and their corresponding polynucleotides. ENZM sequences are useful for preparing a composition for diagnosing or treating a disease or condition associated with decreased expression or overexpression of functional ENZM. The disorders include immune disorders (anaemia, allergy or asthma), infectious disorders (viral, fungal, parasitic or protozoal infection), immune deficiencies (acquired immune deficiencies (acquired immune deficiencies (acquired immune deficiencies (acquired immune deficiencies), reproductive disorders (infertility or impotence), cardiovascular disorders (atherosclerosis or myocardial infarction), eye disorders and cell proliferative disorders (cancer). ENZM DNA is useful in gene therapy. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          KPYHAHKEEMIKIINKGKRFQQAVDAVEEFLRRAKGKDQTSSHNSSDDKNRRNSSEERSRP 120

New nucleic acids and polypeptides, useful for diagnosing, preventing or treating medical conditions

Claim 11; SEQ ID NO 507; 753pp; English.

The invention relates to novel isolated nucleic acid molecules (I) encoding human secreted proteins (II). (I) and (II) are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. (I) and (II) may be used in the prevention, treatment and diagnosis of diseases associated with sequences may also be used as DNA probes in diagnostic assays (e.g. sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR) to detect and quantitate the presence of similar nucleic acid sequences in samples, and so which patients may be in need of restorative therapy. (II) may also be used as antigens in

```
(agonists and antagonists) of the expression and activity of the secreted proteins. The anti-(II) antibodies and antagonists may also be used to down regulate expression and activity of (II). The anti-(II) antibodies can activity of (II). The anti-(II) antibodies may also be used to down regulate expression and activity of (II). The anti-(II) antibodies may also be used as diagnostic agents for detecting the presence of (II) in samples (e.g. by enzyme linked immunosorbant assay (ELISA). The disorders include for example: immune/autoimmune diseases (e.g. HIV) (human immunodeficiency virus) infections, anaemia, rheumatoind arthritis and multiple sclerosis), cancers and hyperroliferative disorders (e.g. Cancers and hyperroliferative disorders (e.g. Parkinson's disease, and charact-Marie-Tooth disease), cardio-/
Caerebrovascular disorders (e.g. cardiac arrest, tachycardia, angina and thrombosis), infections caused by bacteria, viruses and fungia and ocular disorders (e.g. corneal infections). (I) and (II), agonists, antagonists and antibodies can also be used to promote wound healing, maintain organs before transplantation, and support cell culture of primary tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

(HUMA-) HUMAN GENOME

SM Ruben Barash SC, Rosen CA,

WPI; 2001-465558/50. N-PSDB; AAS35012.

Novel polypeptides and polymucleotides useful as diagnostic reagents to diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, and for treating cancers, rheumatoid arthritis.

Claim 11; SEQ ID NO 540; 687pp; English

The present invention relates to the isolation of novel human neoplastic disease associated polypeptides, and CDNA (AAS34767-AAS35050) and DNA

```
are useful in the diagnosis, treatment, prevention and/or proposis of disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative glioma, adult liver cancer, childhood cerebellar astrocytoma, or Hodgkin's lymphoma). The sequences of the invention may also be useful for treating other disorders such as neural disorders, immune system disorders, pulmonary disorders, reproductive disorders, gastrointestinal disorders. pulmonary disorders, reproductive disorders and renal in gene therapy. Adults68-AAU1881 represent the novel human neoplastic disease associated polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at [ftp.wipo.int/pub/published_pct_sequences]
                                                                                                                                                                                                                                                                       0
  sequences encoding for these polypeptides. The sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                 180

The invention relates to one of 238 disclosed human neoplastic disease—
associated polypeptides encoded by 171 disclosed cDNA sequences
considered polypeptides encoded by 171 disclosed cDNA sequences
(including their domains, epitopes, full-length proteins, allellic variants
or species homologues). Also included are there encoding nucleic acids, a
comprising the nucleic acid (expressing the protein), an isolated
continuous binds specifically to the isolated polypeptide, preventing,
treating or ameliorating a medical condition, diagnosing a pathological
condition or a susceptibility to a pathological condition in a subject,
condition or a binding partner to the polypeptide, identifying an activity
in a biological assay, and the gene corresponding to the cDNA sequence.
Conditions preventing, diagnosing, prognosticating, treating or
cancer, autoimmune disorders (e.g. diabetes, rheumatoid arthritis,
contracting medical conditions such as hyperproliferative diseases or
cancer, autoimmune disorders (e.g. diabetes, rheumatoid arthritis,
contracting preventing, medical solutions such as hyperproliferative diseases or
cancer, autoimmune disorders (e.g. diabetes, rheumatoid arthritis,
contracting or expensions, multiple sclerosis, autoimmune thyroiditis
correlations thrombocytopaenia), haematopologic disorders (e.g.
cor haemolytic anaemia), haematopologic reactions including asthma or
correma, inflammatory disorders (e.g. ischaemia-reperfusion injury,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           243
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HAHKEEMIKINKGKRFQQAVDAVEEFLRRAKGKDQTSSHNSSDDKNRNSSEERSRPNSG 123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DEKRKISISEGKVKKNMGEGKKRVSSGSSERGSKSPLKRAQEQSPRKRGRPPKDEKDLTI 183
New isolated human neoplastic disease-associated polypeptides and polymucleotides, useful for diagnosing, preventing, prognosticating or treating medical conditions such as cancer, AIDS, diabetes or Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              63

DNA encoding human-derived growth factor polypeptide - useful to promote wound healing as result of burns or ulcers.
                                                                                                                                                                                                                                                                            Human hepatoma-derived growth factor-2 (HDGF-2) (AAW09404) shows 23% identity and 61% similarity over a 201-amino acid stretch to human HDGF, a mitogen for fibroblasts. Its amino acid sequence was deduced from a cDNA clone (AAT4750) isolated from a human umbilical vein endothelial tissue cDNA library. Recombinant HDGF-2 can be produced in transformed host (e.g. E. coli, Sf9, COS) celle. It is useful in stimulating tissue repair and tissue growth and can also be used to produce antibodies and to screen for antagonists that retard tumour growth and reduce scarring

The invention describes a polypeptide (I) having a deduced amino acid sequence of human hepatoma-derived growth factor-2 (HDGF-2) polypeptide sequence of 249 amino acids (G2) as given in the specification, or its fragments analogues or derivatives. (I) is useful for stimulating vascular endothelial cell growth, and thus is employed in treatment for stimulating re-vascularisation of ischaemic tissues due to various conditions such as thrombosis, arteriosclerosis, and other cardiovascular conditions; stimulating mesolerosis, and other cardiovascular conditions; stimulating meaning in wounds due to injuries, burns, suggery, and ulcers, stimulating our preventing neuronal damages occuring in certain children, suggery, and ulcers, stimulating occuring in certain curvonal disorders or neuron-degenerative conditions such as Alzheimer's disease, parkinson's disease, and AIDS-related complex; stimulating changed conditions such as Alzheimer's disease, parkinson's disease, and AIDS-related complex; stimulating changed cranging due to sunburn by stimulating benefit or proventing melanocyte growth; stimulating prowth and differentiation of haemacopoietic cells of sud bone marrow cells; maintaining organs before transplantation; and inducing tissue to mesolustic for inhibiting the cell growth and therefore are useful for inhibiting the cell growth and therefore are useful for inhibiting about and normal cells and therefore are useful for inhibiting about and intumning and crissues, and therefore are useful for inhibiting about and therefore are useful for inhibiting the cell growth and and normal cells and contained and normal cells and contained therefore are useful for preventing about and normal cells and and normal cells and contained and normal cells and cells and normal cells and normal contained and normal cells and cells and normal contained and normal cells and n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           lens cells after extracapsular cataract surgery; preventing restenosis after balloon angioplasty; and preventing inflammation and growth of scar tissue during wound healing. This is the amino acid sequence of human hepatoma-derived growth factor-2 (HDGF-2)
     organ transplantation; mesodermal tissue; cell growth;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated human hepatoma-derived growth factor-2 polypeptide usefuer promoting healing in wounds, treating or prevention of Alzheimer's disease, stimulating chondrocyte growth, preventing skin aging, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and proliferation e.g. in tumour formation or growth; preventing hypervascular diseases and preventing the proliferation of epithelial
